

ENVIRONMENTAL POLICY

SBS Transit is committed to minimising the environmental impact of its operations and services while delivering safe, reliable, and efficient public transportation across Singapore. We recognise our responsibilities to safeguard the environment and actively contribute to sustainable urban mobility.

We will comply with all relevant environmental laws, regulations, and other requirements applicable to our operations including international standards such as ISO 14001 Environmental Management System and ISO 50001 Energy Management System.

We are dedicated to reducing our environmental footprint by:

- a) Promoting energy-efficient driving techniques among our drivers;
- b) Operating energy-efficient and low-emission vehicles;
- c) Reducing electricity and water consumption; and
- d) Managing waste through effective recycling and upcycling.

We proactively contribute to minimising the effects on climate changes by reducing greenhouse gas emissions and exploring sustainable alternatives, such as photovoltaic panels and rain water harvesting. We strive to improve our environmental performance by setting measurable objectives, monitoring progress, and reviewing our environmental management system regularly.

At SBS Transit, we engage our stakeholders including employees, passengers, and suppliers, to raise heightened awareness of environmental effects and encourage greater ownership of sustainable practices. We communicate our environmental policy, objectives, and performance openly to foster trust and accountability.

This policy will be reviewed annually to ensure its relevance and effectiveness in supporting our environmental goals.
